Method, Apparatus and Program Product Providing for Multiple Print Job Tickets Per Print Job Source File

Abstract of Disclosure

A print job is preferably displayed using a visual job ticketing application. An operator is enabled to create multiple job tickets describing print parameters to be applied to the print job. Using the visual job ticketing application, the operator may select a previously created job ticket to be used to display and/or print the print job. Alterations made to the print job are automatically propagated across all associated print job tickets. When creating new print job tickets, the operator may choose to start with a blank job ticket, a default job ticket, the last active job ticket or any previously created job ticket.
